

It is designed to be portable with modules, components, and some techniques. The making process was crucial to this project, dealing with range of materials and portable mechanisms. Within this context, processes of remaking and reassembly pointed poignantly towards the process of recovery that will support temporary living after earthquake. The modules work and have specific functions such as doors, windows, floors, and other utilities. The concept is pre-fabricated, and their combination could be customized according to patients' needs.
