

CONCEPT

To design new environmental pieces for Laguna Beach that are made of eco-friendly materials, and have an elegant design that fits with the beautiful landscape of Laguna Beach.

CURRENT

Walkway Light

The current walkway light is a little dated. It is different, but does not tie in well with the beautiful landscape. The materials used for this light are not eco-friendly.

Drinking Fountain

This drinking fountain ties in well with the light, but not with the landscape. It is only three feet tall, and that is not tall enough. The paint is peeling and needs to be changed.

Public Bench

Like the other two current pieces, this bench is a little dated. It is elegant, but does not tie in well with the environment. The coat on the wood is not eco-friendly.
