Function

MATERIALS

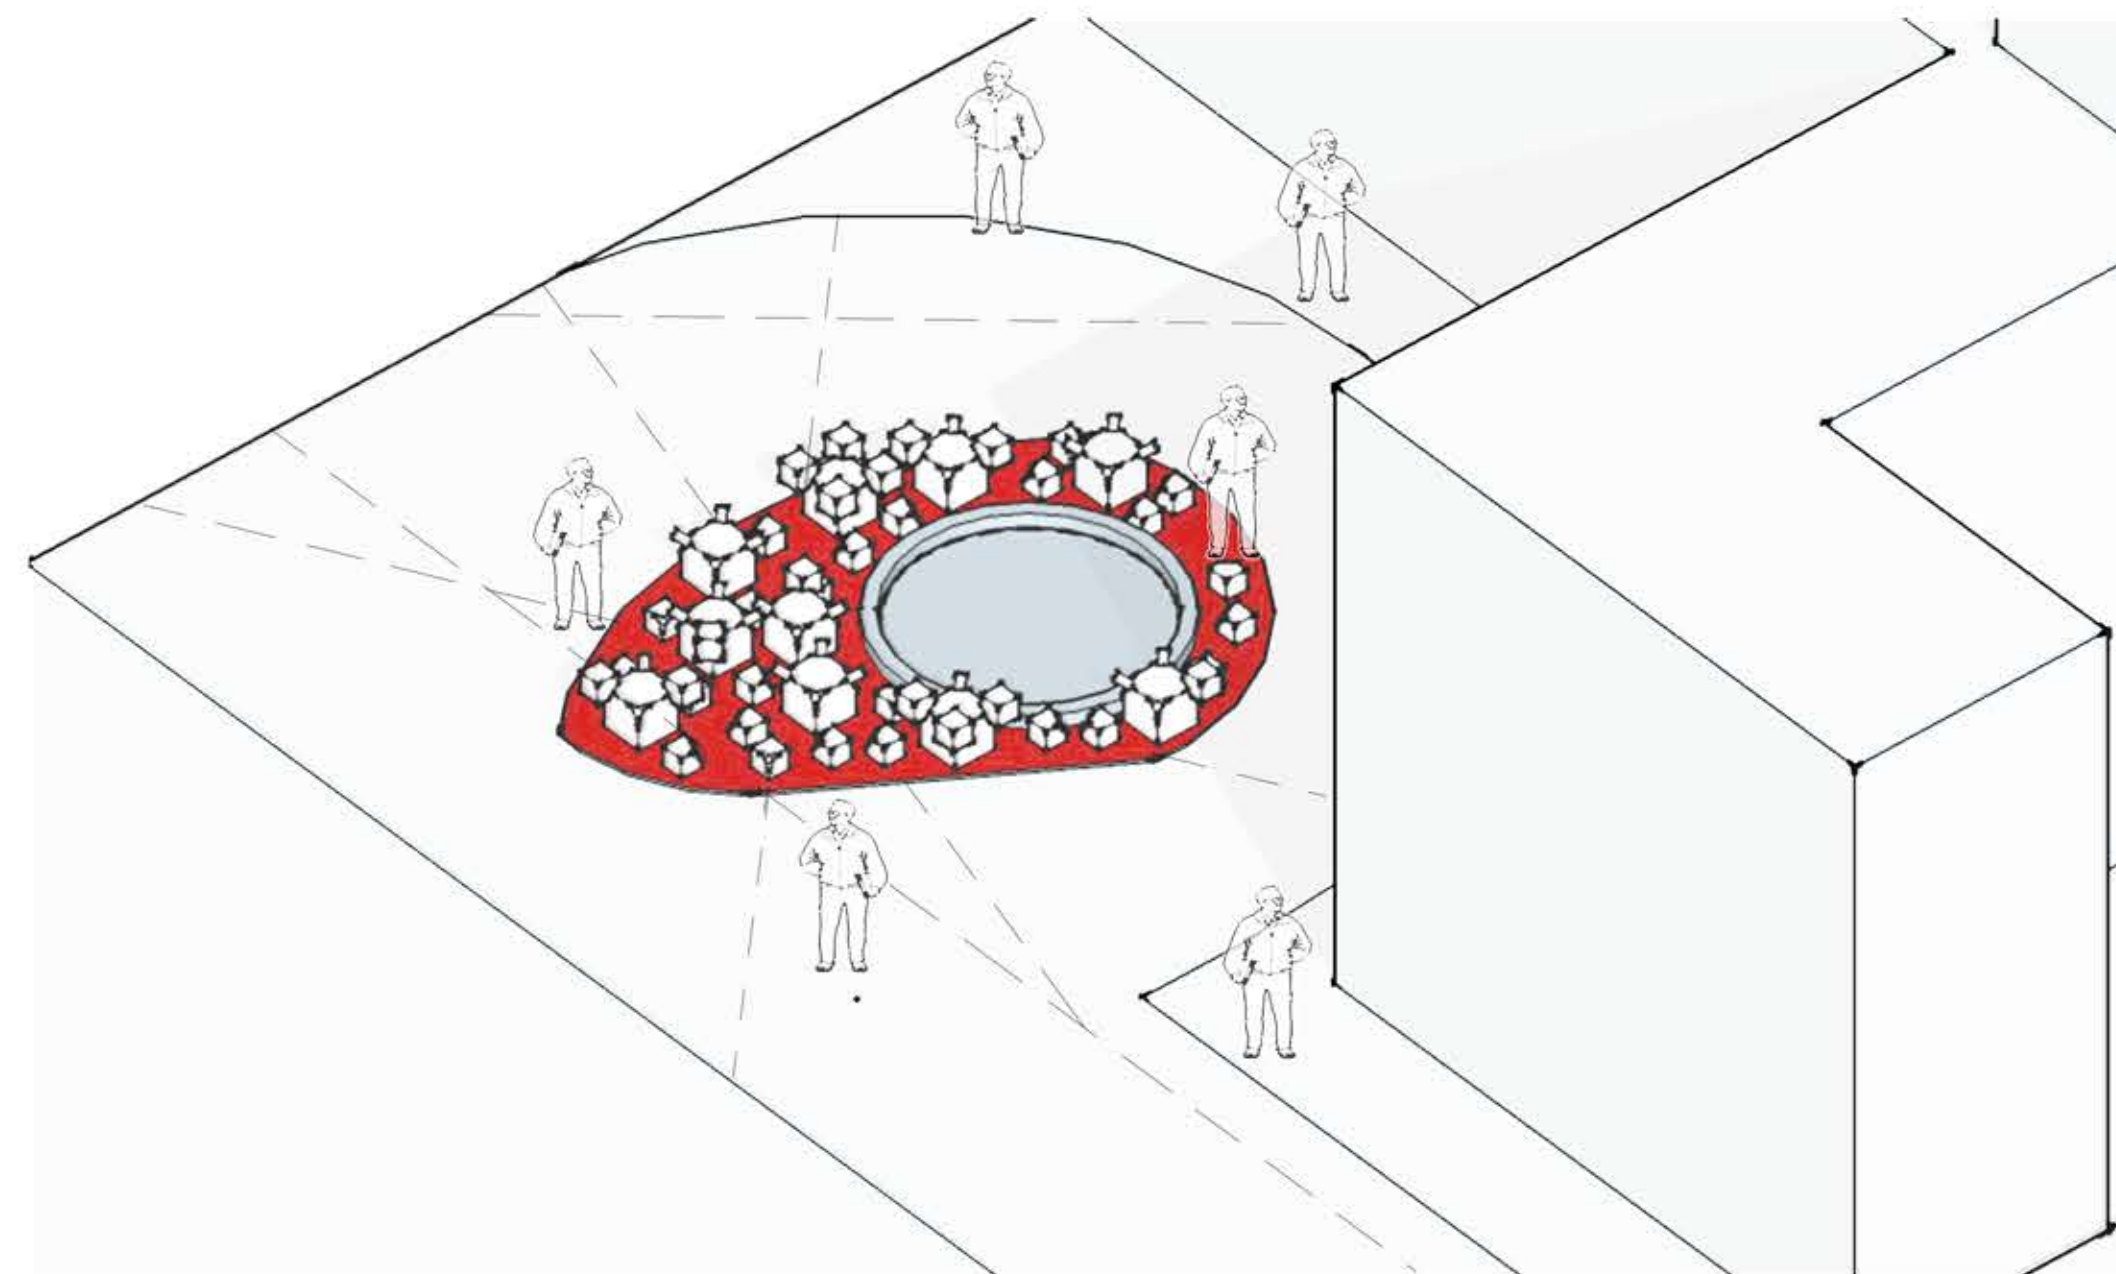

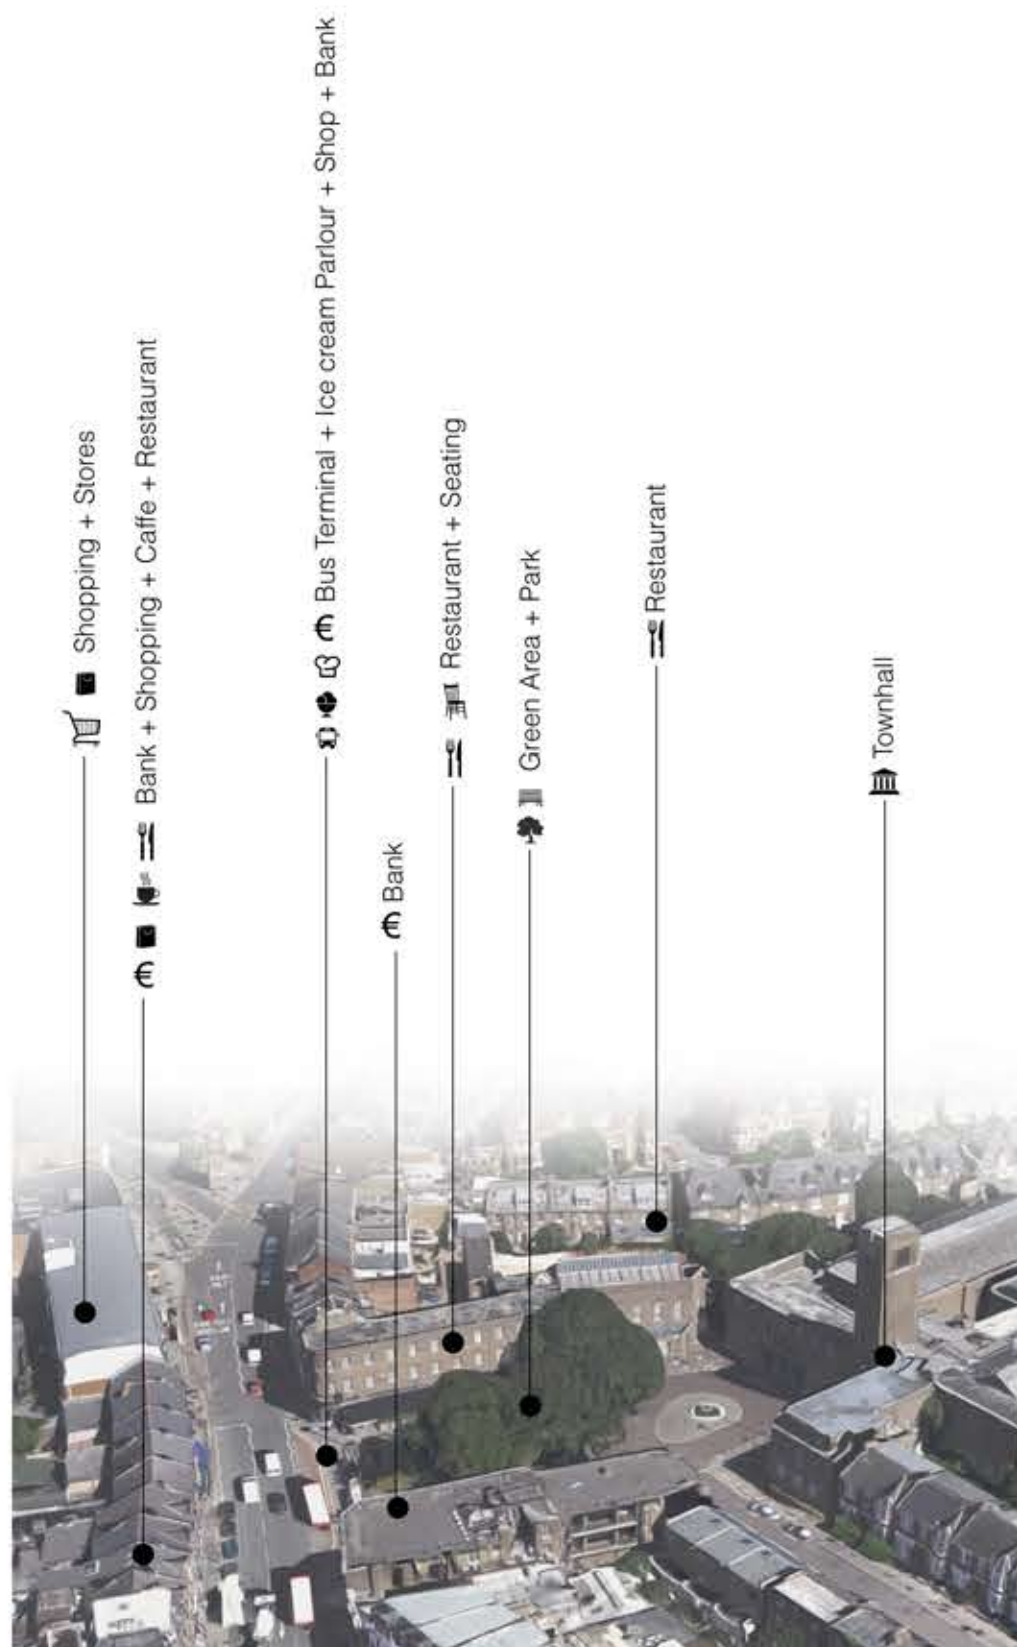

PLASTIC : Main body of individual units.
Single part units will be light weight and membranous for light to pass through

LED: LED's will be embedded inside the units in desired positions. They will be covered by the plastic body of unit. Light emitted brightens the unit giving a toned down light.

LED will be turned on by the unification of proposed units.
Light will be emitted from the units when the circuit is completed.
And will turn off as soon as the circuit is broken again.

PROPOSED DESIGN ; Interaction with people and proximity.
