

# Final Product

This is the final product with all the ideas coming together. The additional feature with the final is having another shelf area to possibly lower the grill frame lower, or to have two things cooking at once. Seeing there was room on the bottom sides, more slots for kabobs have also been added.

The smoker is just small enough to fit inside the grill when the door is closed. The size should accommodate most grills. Then when finished grilling, use cooking mitts to take it out. It can easily washed out with a hose to get out all the ashes of wood chips. Then lastly it can be folded neatly to be put back into storage.
