- New! Wireless MediaMVP now available for music, videos and pictures over 802.11G wireless networks!

[Click here for the MediaMVP datasheet in a PDF format](#)

MediaMVP Features:

- Access digital music, videos or pictures (or Internet radio stations**) from your TV set, over your home network.
- Uses 10Mbit or 100Mbit Ethernet, for the best network performance with any type of digital media. Plays DVD quality videos on your TV set over an Ethernet LAN!
- Composite and S-Video outputs for the best video quality on TV sets, plus stereo audio output to TV sets or home theater systems.
- Watch digital camera pictures (JPEG or GIF) on your TV set. Play slide shows with music, too!
- Plays MP3 music, either individual titles, all the music titles in a directory or M3U, B4S, PLS and ASX playlists.
- Plays MPEG-1, MPEG-2 and DivX recordings made with the Hauppauge WinTV with SoftPVR or WinTV-PVR's. Will also play most other MPEG-1/2 standard video files. Will also play most standard DivX movies*. With MediaMVP's remote control, you can pause, rewind, fast forward or jump through your recorded videos.
- Remote control for easy access to your PC media from your TV set. MediaMVP's remote control allows you to navigate through your PC's disk drives, and displays media names, directories and other information on the TV set. MediaMVP's remote also can control the audio volume and mute of videos and music being played.

*Note: you need a 1.8Ghz or faster PC to play DivX movies.

** Note: Internet radio stations must be directly accessible via a URL to be played through MediaMVP.

MediaMVP connects to your TV set, and allows you to watch and listen to PC based media via an Ethernet network.

MediaMVP is really simple to install: Install the MediaMVP
