look good feel good

Sleek, Smooth, Silky

Do you love the sleek, smooth, silky feeling of hair-free skin? Laser hair removal is the solution for you! Laser hair removal is a process in which hair follicles are treated with laser light, resulting in permanent hair reduction or removal. This procedure can be performed on almost any area of the body with unwanted hair. The most commonly treated areas for women include legs, bikini line, under arms, back, face and upper lips. Laser hair removal is safe (FDA-approved), effective, and provides long-lasting results. With the introduction of advanced laser technology, waxing, razor bumps and painful electrolysis are becoming finally "a thing of the past".

Amerejuve uses state-of-the-art FDA-approved diode laser machines with dual light and radio frequency capabilities that provide maximum treatment effects. Moreover, Amerejuve's proprietary Juvimage™* technology, which utilizes infrared fusion imaging, provides for maximum safety. Although results of laser hair removal treatments can vary depending on an individual's genetics, hormone levels, and other metabolic and skin related factors, a series of 6 sessions typically results in permanent hair reduction in most people, and complete elimination of hair in others.

Amerejuve provides services in a clean comfortable environment. Our treatments are designed and executed by a team of licensed healthcare professionals, a dedicated Medical Director and Physician Consultants.
