

Kevin Reeder, a consultant to Phoebe's Field, is our anthropometric right arm. He brings the child-like-ness to our visuals and reminds us to get ourselves into the act of being children in space. He is an Associate Professor at Georgia Tech where he teaches in the Industrial Design Program. He has been awarded numerous patents, and his work is retained in the Smithsonian Institute Museum of American History. Reeder's practical experience ranges from exhibit design to ophthalmic laser equipment to juvenile products. His current research interest focuses on anthropometrics in product design.
