

VAULT

HardCase Laptop protection

The Vault is a hard shell laptop case that is designed to protect laptop's and other valuable items in everyday- and travelling use. The Vault functions as not only a laptop protective case but also more as a briefcase. The hard outer shell is made from a combination of Acrylonitrile Butadiene Styrene (ABS) and Polycarbonate (PC). This ensures that the case is extremely tough and durable. A process called injection moulding has allowed us to be free with our design, to create a very ergonomically and aesthetically pleasing design that will be well accepted in modern day use.

The inside of the case can be customized to function as a stylish briefcase that holds more than just the a laptop.

The inside of the case is lined with a soft foam material that functions as a shock absorber for the laptop when the case is dropped and for general protection of the laptop.
