

A GUIDE TO LIGHTING YOUR HOME

Light plays an extremely important role in your home, yet all too often it is not considered when designing and decorating the rooms within it. There are a myriad of ways to use light to make your rooms look better and function more effectively. The possibilities are endless and it can be such an economical way of improving your decor. Here are some hints, tips and basic guidelines; the rest is up to you...

10 OUTSIDE LIGHTING

For safety and security, or highlighting the garden. Energysaving bulbs have ultra low electricity use, which means you can even keep one on all night, for around 1p a night – that's less than £4 a year!*

SECURITY LIGHTING

Halogen lighting penetrates the dark with a clear, bright, white intensity. Position lighting at strategic points around your home for ease of movement and security after dark, or fit lights that switch on when movement is detected.

11 GARAGE – Use the sturdy Ecotone bulb with the rounded end. It's tough, reliable, long lasting and doesn't need a shade.

*varies by wattage.
