TRIFLOW

A creation incorporating the highly reputable Triflow Patent with regard to both functionality and form. This product is stylish and unique with the Triflow system being delivered through the central spout; It serves its purpose in an efficient manner and through the use of a separate control panel, a more user friendly service .

The inspiration for this product was derived from the Triflow logo. As shown, the company logo can be spotted from the top view of the control panel and the device itself.

Tease

Designed by Christina Sutcliffe

This control panel consists of 3 touch sensitive locations and a warning light indicating filtration problems. Left, middle and right sections activate hot, filtered and cold water respectively through the use of the Triflow electronic system encased in chrome plated stainless steel.
