

Development

Cruise Control provides easy travel for the commuter.

This lightweight, foldable electronic bike allows the commuter to hop on and off public transport with ease, charging the device 'on the go' with its regular plug outlet. You can step onto the train/bus, remove the battery pack, stand your folded device in the luggage area, plug your battery pack in to charge using the portable cable and relax for the rest of your journey.

With the chain guard and positioning of the folded device, you can simply push the bike along whilst not riding without having the worry of ruining your clothes.

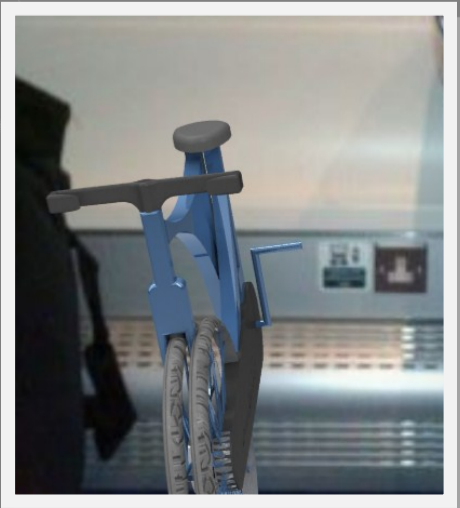

There will be no more sweating or tiredness arriving at work now you can activate the motor at the handle bars and glide along to work.

Cruise Control

Folding method:

1. Release telescopic mechanism to push down handlebars.
2. Unlock centre hinges to swing back half of body round to align the wheels and lock in place.
3. Hold unit by seat and roll along as you walk

Smooth terrain tyres

- Aluminium frame
- Rubber tyres
- 'Extra grip' rubber seat
- Colour scheme may vary
