DILOROLTM XL

Metoprolol Succinate 25 mg / 50 mg extended release Tablets

Effective beta blocker for vital **cardiac health**

- Reduced the relative risk of **all-cause mortality by 34%, all-cause hospitalizations by 19% and Sudden death by 41%.**¹
- Metoprolol is **safer than nebivolol and bisoprolol** in patients with **renal impairment** (ESC guidelines).
- **Consistent β 1-blockade** over the 24-hour dosing interval.
- Prevention of **relapses of post-operative atrial fibrillation** is an additional advantage for the use of **DILOROL.**²
- Only beta blocker that can **reduce infarct size & Infarct/Reperfusion injury**³

Dosage

Heart Failure: The recommended starting dose is 25 mg OD for two weeks in patients with NYHA Class II heart failure and 12.5 mg OD in patients with more severe heart failure. Double the dose every two weeks to the highest dosage level tolerated by the patient or up to 200 mg.
