Le Corbusier

Le Corbusier (1887–1965), born Charles-Édouard Jeanneret-Gris, was a Swiss-French architect, designer, and urban planner who played a pioneering role in modern architecture. He promoted functional, simple designs using modern materials like concrete, steel, and glass, focusing on urban solutions through efficient, high-density housing. He introduced his "Five Points of Architecture," emphasizing elevated structures, open floor plans, free façades, horizontal windows, and roof gardens. Notable works include the Villa Savoye, Unité d'Habitation, Notre Dame du Haut, and the city plan of Chandigarh. His "Radiant City" concept envisioned urban spaces with high-rise blocks and greenery. Additionally, Le Corbusier created the "Modulor," a system based on the Golden Ratio and human proportions to achieve harmony in design.
