

# The Roadmap To Advanced IT Security In Africa.

QRadar delivers total security intelligence through advanced analytics. It provides full visibility and actionable insights to quickly identify real attacks and detect hidden threats.

Almost **2/3** replaced an average of **6 point solutions** with a **single platform** from IBM.

Advanced analytics provide the visibility required to quickly identify real attacks and detect threats others miss.

**Automated:** Easy to install, manage, and tune

**Intelligent:** Behavioral profiling quickly highlights malicious activities

**Integrated:** One web based console improves visibility and efficiency

**70%** 

professional services to install

**80%** 

recognized value within a week

**79%** 

reduced time spent on investigations

## IBM Security QRadar can help you:

- Deploy quickly, tune easily and update when devices are added or removed
- Focus on security events that matter and direct teams where they are needed the most
- Consolidate multiple security offerings onto a single, web-based management console
