

Create predictive models faster in a collaborative environment.

IBM SPSS Modeler is designed to meet the visual productivity needs of data scientists and business analysts. With the integration of this tool into IBM Data Science Experience (DSX) – an interactive, collaborative, cloud-based environment – data science teams can work together to build, deploy and manage models faster.

Using SPSS Modeler embedded in DSX, data scientists can:

Add SPSS Modeler streams to a project in DSX Local and use the shared data sources and connections

Quickly prototype and build a sophisticated modeling tool in a collaborative cognitive environment

Start small and expand with enterprise-class security and governance to meet growing business needs

Learn why SPSS Modeler and DSX are better together
