

## APAC, Europe, United States Industry Associations Join Forces in a Global Alliance for Advancing Cultivated Foods

*The U.S. based Alliance for Meat, Poultry, and Seafood Innovation (AMPS Innovation), APAC Society for Cellular Agriculture (APAC-SCA), and Cellular Agriculture Europe (CAE) are coming together to form a tripartite alliance to identify regional synergies, advocate for regulatory harmonization, and communicate accurate information about the potential of cellular agriculture.*

**(October 24, 9 AM SGT):** AMPS Innovation, APAC-SCA, and CAE collectively represent over thirty leading industry pioneers in the cultivated foods space – innovating a variety of products including cultivated beef, pork, poultry, seafood, dairy, fats and oils. Our associations share the vision of - and work towards - a sustainable and food secure future on a global scale.

This new global alliance will help to strategically connect our fast growing industry and bring our shared vision into a reality. The inaugural meeting of the *Presidents, Vice-Presidents, and Management Committees* of the three associations will be held in Singapore on October 26th with the goal of starting discussion in three key areas:

- **Regional Synergies:** Identifying opportunities for cross-border information sharing on best practices and transparency.
- **Regulatory Harmonization:** Advocacy for the development of consistent, science-based regulatory frameworks and standards for cellular agriculture products that create safe, fair and transparent pathways to market.
- **Communication:** The facilitation of joint communications on global issues and public policy matters.

With these objectives in mind, the tripartite alliance stands together with optimism in contributing to a brighter future with sustainable, delicious, and safe food for the planet.
