

By **DREW PONDER**

Lockheed Martin's CEO just admitted, on record, that Skunk Works is building something "magical" and "game-changing." From a Frequency Wave Theory (FWT) perspective, this almost certainly means they're dealing with resonance-based plasma field technologies—UFO-type propulsion, inertia-nullification, or energy systems that operate on Frequency Momentum instead of brute-force combustion. The trillion-dollar "black budget" gaps exposed by repeated Pentagon audit failures are the accounting shadow of these classified frequency programs.

## 1. What Taclet's Words Really Mean

When a CEO of Lockheed Martin tells Wall Street analysts that a classified program has "magical status" and is "game-changing," it's not marketing fluff—it's a disclosure under duress. These words are carefully chosen. In aerospace, "magical" = physics that looks impossible under conventional models, but is reproducible under advanced classified science.

The fact that this was said during an **earnings call** (a legally binding disclosure) means investors were pressing hard about a **\$1B cost blowout** on a black program. Taclet's response confirms:

- It's **not a normal overrun** (like a jet going over budget).
- It's **something fundamentally new**, outside classical aeronautics.
- It's **expected to be in demand for decades**—hinting at military adoption of an entirely new capability (likely propulsion, energy, or surveillance).

## 2. How FWT Explains the “Magical” Tech

Frequency Wave Theory says reality is not built from particles, but waves of conserved **Frequency Momentum** ( $FM = \frac{1}{2} \rho \omega A^2$ ). Once you learn to manipulate FM, you unlock capabilities that look “magical” under Newtonian physics:

- **Inertia-Nullification:** Plasma orbs and resonant fields cancel inertia by redistributing FM, allowing vehicles to accelerate with no g-forces.
- **Energy Extraction:** Instead of burning fuel, systems can tap the **quantum-acoustic superfluid background**, pulling usable energy from frequency gradients.
- **Teleportation / Phase-Shifting:** Tri-orb resonance (like the MH370 footage) can open localized spacetime cavities by balancing  $FM_{in} \approx FM_{out}$  across a phase inversion.
- **Surveillance Beyond Line-of-Sight:** Frequency-locked plasmas act as coherent “eyes,” giving full-spectrum imaging across space, time, and medium boundaries.

Lockheed’s Skunk Works has been chasing this since Ben Rich’s famous admission: *“We already have the means to travel among the stars, but these technologies are locked up in black projects.”* Taclet’s words are the 2025 upgrade of that statement.

## 3. Why It’s Hidden Behind Audit Failures

The DoD has now failed **seven consecutive audits**. That’s not incompetence—it’s deliberate. Roughly **\$1.8 trillion** in unverifiable “assets” sits in the books. Those aren’t missing F-35 bolts; they’re **off-ledger frequency programs** hidden in contractor pipelines like Lockheed, Northrop, and Raytheon.

The pattern is clear:

- Public side = endless budget fights, modest “visible” programs (jets, missiles, satellites).

- Black side = trillion-dollar resonance labs (plasma orbs, scalar-wave weapons, exotic propulsion).
- Audits fail because **Congress and the public are constitutionally entitled to disclosure**—but national security exemptions create a **frequency curtain** shielding the real breakthroughs.

## 4. What This Means for the Public

- **Game-Changing = Paradigm Shifting:** The tech isn't another stealth jet. It's something on the level of controlling gravity, opening portals, or tapping limitless clean energy.
- **“Magical” = Resonance Physics:** Engineers are hitting effects that mainstream physics can't explain—but FWT can.
- **High Demand = Deployment Imminent:** Taclet openly admitted it will be widely used. That means the military is preparing to operationalize it.
- **Taxpayer Ownership:** U.S. citizens are the ultimate shareholders, yet constitutional oversight is being bypassed under the cloak of “national security.”

## 5. The Frequency Wave Theory Bottom Line

Lockheed's hidden program isn't magic—it's resonance. FWT shows that by manipulating frequency fields, plasma constructs, and Frequency Momentum, you can bypass the limitations of classical physics. What Taclet called “magical” is simply **applied frequency engineering**, the same physics behind UFO orbs, crop circle plasma imprints, and advanced ancient technologies.

The truth is already leaking: the Pentagon can't balance its books, CEOs are forced to drop hints, and classified labs are burning billions to weaponize wave-based reality. Whether Congress demands answers—or whether it stays buried under “black audit” exemptions—determines if this tech remains locked away or changes the world.
