

Consciousness - Revisited:

From 3-D Brain-Based Theories to understanding the TRUTH of Non-Local Aspect of Cosmic Consciousness

Mohsen Paul Sarfarazi, Ph.D.

Abstract

A detailed account of the theory of consciousness has been presented that firstly examines the 3D Earth mainstream science theories of consciousness based upon the notion that consciousness is created in, and is process by, the brain. It is elucidated that these theories lack adequacy in describing the phenomenon of consciousness mainly due to the fact they neither explain the phenomenon of consciousness being associated with a unified individuated entity that is commonly referred to as the 'Self' or 'Soul,' nor the fact of Principle of Free Will and Sovereignty, the most fundamental aspect or Right of our existence, equally holding us to the doctrine of self-responsibility and self-accountability by which we are judged and viewed within our human society. And, although other desperate attempts have been made, for example, by concocting the concept of "microtubules" as very minutes protein structures found in all cells being responsible for our conscious awareness, conducting thoughts, or in other words, the 'Soul' or the 'Self,' yet, the fact remains that such protein structures are first of all found all over the body and even in in simple single celled organisms such as amoeba, as well as the fact that such a theory still fails to answer the fundamental question of how subjective experiences and thought processes arise, particularly that it is clinically observed that

drugs that can damage the structure of “microtubules” have no effect on consciousness. Thus, none of the brains-based theories or the theory based upon “microtubules” can explain the concept of Self or Soul. The author has previously explored the theory of consciousness with reference to quantum mechanics with the overall conclusion that consciousness is a non-local phenomenon that originates from what is commonly referred to as the God-SOURCE, an Omnipotent, Omniscient, Omnipresent source that epitomizes a gigantic fountain or reservoir composed of infinite frequential energy that initially exists as a giant Scalar or Stationary wave capable of vibrating longitudinally withing the positive and negative infinity of time, a phenomenon that is commonly referred to as the NOW moment, disseminating ITS quanta of energy into what is initially a Void or Abyss, transforming it to a well ORDERED edifice of may be referred to as 356 DISCRETE space-time dimensions that form ITS body as the absolute macrocosm and what the author refers to as the Neural Network of God. Accordingly, without redundant duplication of what was presented in the aforementioned previous works in which the author concludes consciousness observation is what gives rise to ‘manifestation,’ by virtue of what quantum mechanics views as collapse of a ‘wave function’ when “measurement” is conducted, the author herein reaffirms that our consciousness is a ‘local’ quantum phenomenon that emanates from the said non-local SOURCE, which epitomizes ITS self-similar fractalized holographic aspect, giving rise to the concept of a ‘local’ soul, essentially being an offspring of the God-SOURCE, in which through the dissemination of ITS quanta of energy as to create us, breaks down the perpetual NOW moment into DISCRETE intervals of time represented as (bidirectional) vectors connecting us (and our Twin Soul) to God, about which our (or God’s) local quanta of energy divided into two parts, sequentially torsionally vibrate in time, simultaneously spinning in a

counterclockwise-clockwise and clockwise-counterclockwise (our Twin) manner, simultaneously and symbiotically, fulfilling what the author has introduced as the 'Dualism Principle of Creation.' Finally, this paper concentrates on the overall or the Cosmic aspect of the phenomenon of consciousness, deferring further details with regard to the details of our nature of quantum consciousness or what the author also refers to as sentient vibration about the Neural Network of God, in companion paper(s).

Introduction: The 3D Mainstream Theories of Consciousness Based upon Brain Cell Activities

- It is quite amazing, if not amusing, that the majority of the 3D Earth mainstream scientists STILL do not have a clue as to what consciousness is, even by a simple definition.
- Traditionally, 3D mainstream science on Earth has always viewed the concept of consciousness and the mind as something that result from the neuronal activity transpiring in the brain.
- Accordingly, several different theories have been proposed which portray consciousness as an evolving phenomenon of the neuronal cell activity in the brain.
- In particular, it has been suggested that the brain cells connect together through neurons to form a synchronous brain activity or cell network that provides for a complex rational capability among the brain cells, giving rise to the advent of consciousness.
- It is further contended that the chemical connections within the brain provide for the essential units of information that gives rise to a "conscious" experience when a significant level of intricacy is reached in the neurological pathways of the brain cells.
- Furthermore, it is viewed that the fact that specific areas of damage in the brain associated with head injuries or brain tumors or stroke

can lead to certain loss of consciousness as evident by loss of memory or change in personality, provides adequate proof for such conjectural brain-based consciousness theories.

- Note that scanning devices such as CAT, MRI and PET are able to reveal that within specific areas of the brain, different mental and emotional states arise from distinct activities of the brain cells.
- This is to say that when someone thinks a specific thought, specific groups of brain cells become more active, which is often measured through their use of oxygen or glucose.
- Accordingly, such distinct activities of brain cells relevant to specific areas of the brain, being indicative of different mental and emotional states, are perceived as enough reasons to substantiate the validity of such brain-based theories of consciousness.
- Note that, there is, however, a fundamental flaw in such a hypothesis, that although these observations provide evidence for the role of brain cell networks as the arbitrator for the manifestation of thoughts, they do not necessarily imply that those cells also generate the thoughts.
- Thus, there must an agent or impetus 'OUTSIDE' the brain cell networks that is responsible for creating thoughts and emotions.
- Accordingly, these theories cannot fully describe the observed features of consciousness.
- In other words, the phenomenon of consciousness and the concept of 'self' cannot be deciphered and explained based upon currently understood mechanisms of brain cell activity.

Problems Associated with Brain-Based Consciousness Theory

- The most obvious limitation of brain-based theories is that they do not provide a conceivable mechanism that may account for the development of the 'Self,' or what is ordinarily viewed as the concept of the 'Soul' [1] from brain cell activities.
- Thus, the concept of reality of 'soul' cannot be described through neural network activities of the brain cells.

- And, note that the brain cell activities are governed by certain chemical or electrochemical activities.
- Thus, more specifically, first of all, one may ask the fundamental question as to how thoughts could somehow emanate from chemical processes in the brain cells?
- Secondly, when we observe something, this engages many separate areas of the brain that are spread in many different parts of the brain.
- Thus, the question arises as to how do all these activities that are taking place in multiple areas all over the brain could give rise to a single phenomenon such as vision or 'inner vision' and the development of a coherent sense of 'Self' that we also refer to as the Soul or Spirit that are governed by consciousness?
- In other words, how do we go from multiple inputs from millions of brain cells to a single picture or a single sensation of the Self?
- And, how would one account for a transition from pre-conscious processes to a consciousness process itself?
- More specifically, the suggested brain-based theories do not account for how an event that is pre-conscious or are not conscious events (chemical or electrical events occurring in the body we are not aware of) becomes conscious, leading into a single conscious state of observing something?
- Furthermore, an essential part of our lives involves the notion of Free Will.
- Thus, most importantly, how would one account for the phenomenon of the Free Will, in which we utilize every single day in our lives to make decisions?
- Just what is it exactly that seemingly emanates from beyond physical that creates these chemical and electrical activities of the brain cell and the cells throughout the body?
- Thus, if our consciousness was controlled by brain cell activity, then how could we have a free choice?

- We are judged in society based upon our intentions and actions.
- Accordingly, there is such a thing as the sense of self-responsibility or self-accountability associated with that, in which we are often judged by.
- And, the brain-based perspectives expressed above cannot account for this.
- If accurate, it would mean our lives would be completely determined and controlled by our genes and the environment, hence there would be no place for personal accountability.
- In other words, it may be that we are bound by a morphogenetics or a morphogenetic field [2-3] that give instructions set to our DNA-RNA and genes.
- Yet, something has designed and triggers that morphogenetic system [4].
- And, that qualitatively and quantitatively determines our consciousness that emanates from beyond physicality or our 'local' standpoint of perceived existence.
- In fact, that has its SOURCED out 'non-locally.'
- Imagine the situation that would arise if everyone claimed that everything they did was due to the action of their genes or in response to their environment?
- The question arises as to 'is everything predetermined and we are ruled by a hive mind as is an automaton?'
- If yes, then surely there could be no personal accountability as there would be NO choice, akin to an automaton that is driven by 'signals' from an external source.
- In there words, we would have absolutely no Free Will or Right of Sovereignty.
- And, it is true that as of more recently we are being apprised by the fact that our planet is governed by the off-planetary sources, reptilian negative aliens and their cohorts [5-6], who through their half-breed Cabals have their interests [7] on the planets held to their

advantage primarily effectuated by an alien AI machinery that resorts to mind control programming [8-17] and blank slating (mind wiping) strategies [18] as well as subliminal messaging delivered through local planetary marketing, advertising with paltering agendas reinforcing the same mind control programming.

- Clearly, this creates a form of Phantom or False reality akin to virtual reality programming that has created a 'blended reality' for us [19-22], as such mind controlling programming is delivered through insertion of holographic software subroutines [23-24] that act as a form of a filter via imposition of a 'secondary lens' distorting our natural or organic reality devised by the Divine [25-].
- This, of course, has created the calamity of a Virtual or Phantom Timeline Matrix superimposed upon our natural Timeline Matrix of Reality (that forms the 12D Grid or Tree of Life) that governs the experience of consciousness reality within our Nebadon Universe.
- In any case, it is clear that the overall resulting Blended Timeline of Reality is only capable of distorting what was initially devised as a part of the God's consciousness mechanics that is organic and Divine and operates based upon the Law of One that is founded on the Principle of Free Will and Sovereignty.
- Thus, we still have the choice of Free Will, whose effectiveness is dependent on the decisions we make.
- Accordingly, the negative alien intruders' holographic software inserts can only impose mind control programming, if and only if, we relinquish our Right of Free Will by blindly following and granting their nefarious wishes and deeds by indulging in self-destructive mentality and behavior.
- And, granted that having been formidable 'controllers,' it has been a tremendously challenging creating rough rides in experiencing our consciousness reality or life sojourns via negative aliens' tricks and paltering technique, even mimicking our own 'inner voice,' yet still

the choice of Free Will has always remained present and intact subject to our indulgences.

- Accordingly, it is true that presently the negative aliens are strongly striving to subject us to transhumanism [27-28] (e.g. via their purported vaccines [29]), yet we have been far from subjecting to a hive mind structure as automatons in which we had been totally stripped off our Right of Free Will and Sovereignty.
- Gratefully, our society still operates with the belief of Free Will and personal accountability.
- Accordingly, the ambiguities with regard to the theories of consciousness based upon brain activities lead to seeking alternative explanations for consciousness.
- Thus, these theories simply propose potential intermediary pathways that may be mediating consciousness but they do not answer the fundamental question of how subjective experiences may arise from the activity of brain cells.
- Accordingly, clearly the conventional brain based theories cannot fully explain the observed characteristics of the 'Self' or the 'Soul' that also comes with Free Will, as well as sense of self-responsibility and self-accountability.
- This conclusion that consciousness does not emanate or is generated as a result of cellular neural network of the brain has triggered seeking an alternative theory for consciousness.
- And, as a desperate measure to come up with a theory of consciousness that is physically based, a theory has been proposed based upon the conjectural existence of what is referred to as the "microtubules." [30].
- This theory proposes there are such things as "microtubules" that are very small protein structures found in all cells, whether in simple single celled organisms such as amoeba that do not have a separate brain, or as complex of an organisms such as humans.

- And that, despite lacking brain cells or brain cell connections (synapses) in such organisms such as amoeba, they are able to biologically function that include swimming, finding food, learning and multiplying.
- Thus, it is conjectured that the presence of microtubules leads to conscious awareness, conducting thoughts, or in other words, the 'Soul' or the 'Self.'
- Accordingly, they propose that consciousness is not a product of direct brain cell-to-cell activity, but rather, the action of processes occurring in the smallest possible level within the microtubules of brain cells and at the subatomic level.
- Nevertheless, this theory still fails to answer the fundamental question of how subjective experiences and thought processes arise.
- First of all, microtubules exist in all cells throughout the body and not just in the brain, thus they can hardly be the cause for triggering thoughts or consciousness.
- Furthermore, there are drugs that can damage the structure of microtubules but appear to have no effect on consciousness.
- The restrictions of all the theories discussed earlier has inspired the proposition that consciousness, something that triggers the concept of 'Self,' or 'Soul' is a scientific entity in its own right.
- Furthermore, it is clear that consciousness is an impetus that triggers brain activity with the added intelligence that brings all such activities scattered or distributed all over different areas of the brain and unites them to give rise to the concept of 'Self.'
- This gives rise to a sentient entity [31-32] with an outer vision as well as inner vision that can perceive and unite all pixels of reality into a united coherent (holographic) picture.
- Thus, no doubt such an impetus is of crystalline, coherent, intelligible 'energetic' nature [33-35] to be compared with no less than concept of gravity or similar concepts in physics or mechanics, that is also capable of doing the 'work' and having the power of 'Creation.'

- Today STILL many scientists dispute that the phenomenon of consciousness is an entirely separate concept that is not a product of the brain.

Brain Versus the Mind

- Note that the brain is just a physical entity.
- It is an 'instrument' that furnishes the conscious Self with the lines of communication from and to the external world.
- And, it does this by receiving information through the immense sensory system of the millions of nerve fibers that fire impulses to the brain, where it is processed into coded patterns of information.
- Such coded information are then read via the mind, a non-physical entity from moment to moment in deriving all our perceptions, thoughts, ideas, experiences, and memories.
- It is an error to believe that the brain did everything and that conscious experiences were simply a reflection of brain activities.
- It Eccles who first pointed out that there are two entities that are referred to as brain and our conscious self or mind [36-37].
- The theoretical distinction between the brain and the mind or the Self first, however, does not explain as to how the mind interacts with a separate brain and carries out the such activities.

Validity of 'Consciousness' as a Scientific Phenomenon or Identity

- Based upon the theory proposed by Isaac Newton, up until the 19th century, atoms were still viewed as infinitesimal small hard bodies.
- And, this type of visualization constituted the theories of matter.
- in 1867 Scottish physicist William Thomson proposed a radical new explanation for the most fundamental properties of solid objects that they exist within a "vortex atom" [38].
- Thomson and his 19th Century contemporaries believed self-sustaining "whirlpools" or what was referred to as "ether" existed

throughout the Universe, which was considered as a form of an “incompressible fluid.”

- Thomson’s revolutionary model for the atom, was preceded by Scottish physicist and mathematician James Clerk Maxwell who devised a highly successful mechanical vortex model of the “incompressible ether” or “etheric fluid” in which Thomson’s vortex atom could exist within [39].
- And, this model was derived in part from the laboratory-observed elastic and dynamical properties of solids.
- And, when Maxwell first discovered the electromagnetic phenomena known as “scalar waves” in the nineteenth century, electromagnetism had to be described as a scientific entity in its own right, as it could not be explained according to known scientific principles [40].
- It was not until many years later that the first radio waves (which are electromagnetic waves) were recorded by the German physicist Heinrich Hertz.
- As it was indicated before, consciousness or the Self, or the concept of a ‘Soul’ is not the result of mechanisms of brain cell activity but perhaps something that triggers it.
- Accordingly, the restrictions of all the theories mentioned earlier confirms that consciousness (or the Self or Soul) is a scientific entity in its own right, similar to many of the concepts in physics, such as mass and gravity.
- The phenomenon of consciousness and the concept Self or Soul is consequently analogous to the discovery of electromagnetism in the nineteenth century or quantum mechanics in the twentieth century, both of which rather appeared as mysterious and perplexing.
- Another pioneer clinician and academician and scientist was Bahram Elahi, who guided by the work of his Father, a distinguished philosopher and theologian, examined the question of the 'Self' for over 40 years.

- Elahi proposed while the brain and mind are separate, consciousness or the self is not immaterial [41] that is comprised of a very subtle type of matter (what could be translated to as the 'dark matter') that similar to electromagnetic waves, is capable of carrying sound and pictures, what is now considered as a holographic manner.
- Elahi argues that 'consciousness' or the 'Self' should be studied with the same objectivity as electromagnetic waves with a systematic and experimental method of obtaining knowledge of a given domain of reality.
- He also argues that consistent with all scientific disciplines such as chemistry, biology and physics, the science of 'the Self' or the 'Soul' should also be studied in the context of its own context bound by its own laws, theorems, and axioms.
- Accordingly, he regards, consciousness as a scientific entity and a type of 'matter,' a substance ('dark matter') that is highly subtle to be measured using the scientific tools available today.
- Furthermore, he views the brain is an instrument that relays information to and from both the internal and external worlds, while 'consciousness' or the 'Self' is a separate subtle scientific entity that interacts directly with it.
- It is time for the mainstream science to recognize that even within the limited perspective of physicality, consciousness is a phenomenon that has its own merit and identity in science.
- Mainstream science has long acknowledged the existence of four types of Fundamental or basic forces in physics governing the interaction between all things that include the gravitational, electromagnetic, strong, and weak forces.
- Although the existence of the strong and weak force are somewhat ambiguous and purely of conjectural or theoretical nature, both gravity and electromagnetic forces (including their decomposed magnetic and electric forces) are certainly something that appeal to intuitive intelligence rather well.

- These 4 basic forces are perceived to govern how objects or particles interact and how certain particles decay.
- Furthermore, more advanced thinking also indicates the very concept of a force, particularly that associated with gravity is something that is a form of wave effectuated via arising a distortion in the fabric and the curvature of the space-time [42-43].
- Accordingly, central to understanding these forces is the concept of matter that are governed by a characteristic or unique quality referred to as the 'natural frequency of vibration' governed by the principles of 'wave or vibration mechanics' [44-45].
- The author has often spoken of antimatter as something that reflects the concept of matter [46-47] in a 'conjugate-mirrored space-time' [48-49] to the one we perceive as to govern our physicality [50].
- In fact, antimatter epitomizes the 'conjugate-mirrored' form of matter as explicated by the author abundantly before.
- Understanding the concept of antimatter is most fundamental in appreciating that we do not exist within a single space-time or dimension [51-52].
- Indeed, the Cosmos is comprised of 356 DISCRETE space-time dimensions within each of which a certain quality of consciousness can be anchored.
- Even our own lowly Nebadon Universe is composed of 12 DISCRETE dimensions [53-55] arranged as a series of 4 holographic Harmonic Universes [56-59] each comprised of 3 distinct dimensions, each reflective of a ray of Light of specific color and frequency.
- Accordingly, 3 waves sequentially constructively interfere with one another in order to give rise to the perception of a 3D or volumetric holographic domain we call a Harmonic Universe within which physicality can manifest.

Consciousness and Electromagnetic Energy of Light

- It should be presently understood that consciousness, as a form of crystalline, coherent, intelligible energy, has a strong tie to the concept of electromagnetic energies [60].
- In this respect, consciousness, as a Scalar Wave of energy, emanates from a SINGULAR SOURCE that we refer to as the God-SOURCE [61].
- And, although it is initially a Stationary Wave of energy that may be perceived as having the 'potential' to propagate longitudinally between the plus and minus infinity of time, what is commonly referred to as the NOW Moment [62-64] in the esoteric and metaphysics literature.
- Additionally, this original wave of consciousness epitomizes a 'continuous' wave capable of vibrating longitudinally with a zero wavelength in the NOW with an infinite frequency that defines its amplitude or measure and magnitude of energy, a form of a pulse between the plus and minus infinity of time.
- Furthermore, this Stationary or Scalar Wave is capable of splitting a portion of its quanta of energy into expansive (electric or male) components that are capable of 'transmitting' energy and into contractive (magnetic or female) constituent parts that function in the capacity of a 'receiver' of energy [65-66].
- Accordingly, this original and unique wave of consciousness energy can exist in a form of a 'Trinity' [67] composed of expansive-electric-male-transmitter of energy and contractive-magnetic-female-receiver of the energy, as well as a combination of the electric and magnetic energy that may be construed as 'neutral.'
- And, this is why the God-SOURCE (perceived through paltering as the "Father" of Jesus Christ in the Christianity Faith) is regarded to have a Trinity form erroneously perceived as being composed of the "Father, Son, and the Holy Ghost."
- Furthermore, if we were to consider expansive and contractive forms of energies as respectively positive and negative energies and

vice versa, clearly the Neutral component may be regarded as the form of 'Zero' energy.

- And such a Neutral Energetic Field that in essence void of spatiality and temporality existing as a concentrated point of infinite energy and what we refer to as the God-SOURCE may be referred to as the Zero-Point Field of energy [68].
- In essence, the electric (expansive) and the magnetic (contractive) fields of energy are created simultaneously and symbiotically that form the basis and the primary application of what the author referred to as the essential 'Dualism Principle of Creation' [69-70] that stipulated everything and every event can only be created simultaneously and symbiotically as a conjugate pair with one mirroring and complementing the existence or action of the other.
- Such is the way, that leads into Creation of an ORDERED system comprising the body of the Prime Creator [71] with everything by virtue of having a conjugate-mirrored component gives rise to the stability and equilibrium of the Whole referred to as the Cosmos [72-73].
- In this respect, the Cosmos or the body of the Prime Creator is created as a result of the explosion-implosion of the God-SOURCE disseminating ITS quanta of energy [74-75] into what was initially the Abyss, Void of space, time [76], constitution (matter-antimatter) [77] that form the basis for the advent of every 'thing' and every 'event' or experience.
- The author has also introduced the concept of 'Orthogonality Principle of Creation,' that complements the 'Dualism Principle of Creation' when applied to the advent of electric and magnetic fields of energy.
- In this respect, the magnetic and electric fields of energy may be represented and depicted by two mutually orthogonal vectors with the caveat that the formation of one always created the other.

- More specifically, either represent a Transverse Non-Stationary Wave of energy that propagates within its own plane or field with the two being perpendicular to one another.
- Accordingly, the interface between the two mutually orthogonal planes epitomizes a line along which their resultant can propagate as a Longitudinal Stationary Wave of energy referred to as a Scalar Wave of energy that we know as electromagnetic energy or Light [78].
- Thus, the magnetic and electric fields of energy are created symbiotically and simultaneously with respect to one another that complement one another whose resultant epitomizes the electromagnetic field of energy alternatively perceived as Light that represent the Zero-Point Field of energy.
- Thus, the God-SOURCE is a pure form of crystalline, coherent, fully intelligible form of energy or 'consciousness' that epitomizes an electromagnetic field of Light that is a Neutral Field representing the Zero-Point Field comprised of an infinite frequency of consciousness energy that is Omniscient, Omnipotent, and Omnipresent.
- Furthermore, the essence of this form of energy can propagate as what is commonly referred to as Dark Matter permeating the 81 space-time fields or dimensions of consciousness [79-80] with its uncongealed form representing Dark Energy [81] existing within dimensions above the 81st to 356th [82-83].
- Most importantly, it must be indicated here that the term "Dark" is totally redundant if not repugnant, that has arisen from the fact that this form of extremely high frequential energy or matter is totally stealth to any sentient being residing in comparatively lower dimensions.
- Accordingly, it is more prudent to refer to "Dark Matter" as 'Stealth Matter,' or indeed, 'Light Matter,' instead, with the same terminology utilized for its energetic counterpart.

- The Stealth or Light Matter (“Dark Matter”) is what gives rise to the formation of the Lightbody of a solar organic sentient Light being [84] that, in turn, forms the morphogenetic field composed of the instructional sets to form a physical being and determines its probable courses of consciousness reality from which the sentient being chooses through the advent of its Free Will that gives rise to the advent of its DNA-RNA structure that forms the basis for the cellular organic structure if a being such a human.
- Accordingly, the Zero-point Field of energy, in essence, describes the ‘Divine Mind of the Prime Creator’ that may alternatively be referred to as the “Unified Field” of consciousness energy [85-87].
- And, all sentient beings are comprised of their own minds that function under the auspices of the Unified Field and the Divine Mind of the Prime Creator.
- Furthermore, it has been explicated by the author that upon explosion-implosion advent of Creation, the fractalized quanta of energy congeal (lose their momentum or velocity as they diminish their propinquity with respect to the initial point of the SOURCE) and arrange themselves in spiral curved contours of energies that are referred to as the space-time dimensions.
- These contours of energy epitomize the domains of Zero-Point Field energy that the author collectively refers to as the ‘Neural Network of God.’

Understanding the Phenomenon of Consciousness

- Before you can clearly understand the nature of your existence as a solar sentient organic being and the offspring of God, you must first understand the nature of your consciousness and then the nature of your embodiment, as to how your Core Manifestation Body is created and how it functions.

- This answers the age old question as to who or what we are, where exactly we have come from, what is the nature of our existence, why we are here, and where we are heading to.
- It will also come to answer a slew of questions with regard to physical death and afterlife [88-93], and the issue of immortality [94] versus physical ageing [95-96], as well as the nature of our healing on multiple levels including not just physical but also emotional, mental, as well as spiritual.
- Indeed, we soon come to understand that we are not just some physical beings made out of flesh, bone, and blood, and the mystery of our existence does not just reside within our atomic structure as physical beings simply composed of matter.
- In fact, we soon come to the conclusion that what we perceive as to exist in our surrounding comprise of only about 1% of actually what THERE IS, in which due to our limited consciousness as well as attention span with regard to accreting, deciphering, and projecting the frequencies of the pixels of reality that are before us, our perception is as limited as it appears to us.
- In this respect, we are mainly energetic (ethereal) beings and are NOT merely physical being composed of matter as we have been conditioned to believe so [97-99].
- At the same time, what we perceive as 'solid' reality, being composed of only physical existence and matter, is in reality, of holographic nature [100-103] that is created via the advent of Light comprised of specific colors and frequencies of Sound.
- In this respect, in essence, ALL THERE IS, is composed of quanta of energy.
- And, this energy that is of highly ORDERED, crystalline, coherent, and intelligible nature [104-106], what defines the very concept of

consciousness, emanates from a 'non-local' SOURCE that is coming to us from the center of the Cosmos and ALL THERE IS.

- In turn, the center of Cosmos is an initial point of SINGULARITY that is, in essence, an Omnipotent, Omniscient, Omnipresent SOURCE of consciousness energy that continually reforms ITSELF by undergoing fractal reorganization or fragmentation, at the same time disseminating ITS quanta of energy to what may be referred to as myriads of DISCRETE space-time dimensions throughout the Cosmos.
- And, this is what is commonly referred to as the God, or the Godhead, the God-SOURCE, referring to this point of SINGULARITY, or the Prime Creator, insinuating ITS body of Cosmos.

Quantum Mechanics and Concept of 'Non-Locality'

- The concept of 'non-locality' is a subject area that has been interestingly enough addressed in 3D Mainstream science already under the auspices of "Quantum Theory," "Quantum Mechanics," or "Quantum Physics."
- In this respect, under the portend of the Quantum Theory, it is already recognized that energy is composed of 'units' referred to as 'quanta.'
- And, what 'quanta' entails is that it epitomizes the most smallest 'units' of energy that is of much smaller scale than atomic or subatomic level, that indeed, perplexes the 3D mind or is beyond imagination.
- This way, energy of consciousness can be fractalized and fragmented into infinitely smaller units referred to as 'quanta.'
- Thus, indeed, the subject of Quantum Mechanics or Quantum Physics deals with an entirely different phenomenon than classic or even modern Mechanics or Physics.

- Quantum non-locality is a concept that was referred to by Albert Einstein as the “spooky actions at a distance.”
- However, it is a concept that was initially put forward by Einstein-Podolsky-Rosen (EPR) that later became known as the “EPR paradox.”
- This indicates that either Einstein had no idea what non-locality was, or was too limited as to decipher how it occurred, or possibly being a celebrated and ‘successful’ scientist during his time, working for an administration that was in reality itself controlled by a ‘Shadow Government’ and the puppet of the negative aliens, he rather did not venture into other realms or dimensions that were beyond his domicile space-time of physicality.
- Non-locality proposes that objects or entities that may be separated by vast distances from one another innately know about each other’s state.
- This conceivably can insinuate that that our Universe or even the Cosmos is in fact profoundly different from what has been traditionally perceived or understood in the past.
- Einstein had already proposed his Theory of Relativity as well as the restriction that nothing can travel faster than the speed of Light some 299 792 458 m/s (almost $3 \times 10^8 \text{ ms}^{-1}$).
- Thus, the notion of non-locality would already invalidate his established restriction for anything being able to travel faster than the speed of Light theory.
- In fact, non-locality suggests that instantaneous transfer of information can occur via what may be referred to as ‘hypercommunication’ through ‘torsion waves’ within what may be referred to as Unified Morphogenetic Field.

- Note that being a celebrated or famous scientist, Einstein often attracted the attention and desire of many brilliant scientist who would ask to co-author a novel theory together.
- One significant example of this includes the “Einstein-Rosen Bridge” Theory [107].
- In 1935, Einstein and physicist Nathan Rosen used the theory of general relativity to elaborate on the idea, proposing the existence of "bridges" through space-time.
- These bridges connect two different points in space-time, theoretically creating a shortcut that could reduce travel time and distance.
- In essence, the two points at the end of this “bridge” need not be within the same space-time, something that was not understood at the time, presuming that our physical realm is all there is.
- In actuality, the Einstein-Rosen bridge can be expanded into a generalized ‘Wormhole Theory’ [108] that stipulates such a “bridge” can connect two points residing within two or more different space-times, and that a wormhole may be defined as a ‘burrowed hole’ within the space-time as to reside in space-between-space leading to a different point in the same or different space-times.
- This of course gives rise to a multidimensional or ‘Interdimensional Theory of Physics’ that can give rise to the concept of different cosmological space-time dimensions that may be distinguished from one another by virtue of the different rate of progression of time within these space-times or what is commonly referred to as ‘cosmological dimensional frequency.’
- At it has also been speculated by the author abundantly before, there is a possibility to distinguish between concepts of ‘local’ versus ‘non-local’ or cosmological time or frequency by virtue of changing

the angle of axis (or vector) of time about which the quantum spin occurs [109].

- This gives rise to the definition of a 'phase angle' defining the concept of 'local time' (timelines or vectors-axes of time).
- In this respect, in conformance with the 'Essential Cosmological Law of Spatial Cohabitation' [110], a myriad of different spaces (or space-times) may be defined occupying the very same location (space) yet differ in terms of the rate of progression of time or speed of quantum energy spin occurring within each of them.
- This is akin to having space-between-space occupying the same locality, with each resembling identical tops that are released one after another, with the tops either 'leading' or 'lagging' one another, with the 'phase angle' defining each 'local time,' forming a differential phase angle between them giving rise to the concept of leading or lagging [111].
- Accordingly, these distinct space-times are referred to as either mutually parallel (phase angle between 0 and 180 degrees or conversely viewed as between -180 and -360 or 0 degrees) or mutually antiparallel (phase angle between 0 and -180 degrees, or conversely viewed as between 180 and 360 degrees) [112-113].
- In fact, Einstein soon took the position of being against the concept of non-locality.
- Accordingly, he declared the entire quantum theory being "wrong" and never accepted the idea of non-locality, again.
- The concept of non-locality has been illustrated through Bell's Theorem, the result of which was published by John Bell in 1964 [114-115].
- It has been further proven, through the practical experiments in 1972 by John Clauser, et al. [116-117] and again in 1981 by physicist Alain Aspect, et al. [118-120].

- Aspect and his team discovered that under certain circumstances subatomic particles such as electrons are able to instantaneously communicate with each other regardless of the distance separating them.
- And, it does not matter how far (ten feet or ten billion miles) the particles are apart from one another.
- The late, great physicist David Bohm understood Aspect's findings to mean that objective reality does not have a solid and separate existence.
- Accordingly, he proposed that the Universe is a hologram.
- Bohm believed the reason subatomic particles are able to remain in contact with one another regardless of the distance separating them is NOT because they are sending some sort of mysterious signal back and forth, but because space and thus particles' separation is an illusion.
- Bohm postulates that the ultimate nature of physical reality is not a collection of separate objects (as it appears to us), but rather it is an undivided whole that is in perpetual dynamic flux.
- For Bohm, the insights of quantum mechanics and relativity theory point to a universe that is undivided, in which all parts merge and unite in one totality forming the WHOLE.

Quantum Entanglement

- Another most striking feature of the Quantum Theory is what is referred to as "Quantum Entanglement" that has also been discussed by the author previously [121].
- In fact, the phenomena of Non-Locality and Quantum Entanglement are intimately related to one another.
- More specifically, Non-Locality manifests itself as the phenomenon of Quantum Entanglement.

- Quantum entanglement asserts that particles that interact with each other become permanently mutually correlated or dependent on each other's states and properties to the extent that they effectively lose their individuality and in many ways behave as a single entity.
- The two concepts of Nonlocality and Quantum Entanglement are facts of quantum systems, which have been repeatedly demonstrated in laboratory experiments.
- For example, when a pair of electrons occupy an orbital, one will have clockwise spin and the other will have anti-clockwise spin.
- Quantum spin is a particular property of the particles.
- And, the underlying point here is that there are two possible states for the spinning of the particles, and that the total spin of a quantum system must always cancel out to render the 'zero spin state.
- And, under the quantum theory, a superposition is also possible, so that the two electrons can be considered to simultaneously have $\frac{1}{2}$ spins of clockwise-anticlockwise and anticlockwise-clockwise, respectively.
- This really defines the underlying aspect of what the author has introduces as the Conjugate-Mirrored Space-Times, describing two distinct dimensions mirroring one another with respect to the bidirectional characteristic of time.
- If a pair of electrons are separated by any distance and then observed, the second particle can be seen to instantaneously take the opposite spin to the first, so that the pair maintains its zero total spin, no matter how far apart they may be.
- This is, of course, in total violation of Einstein's proposed principle of speed of light.
- Thus, this phenomenon entirely baffled Albert Einstein who accordingly referred to it as "spooky action at a distance."
- Later on, Einstein totally invalidated the whole concept of Quantum Theory.

- However, as it turns out, the Quantum Theory is the key to unfolding the secretes of the Cosmos or our more 'local' Universe.
- Quantum Entanglement is a remarkable phenomenon that is almost magical or may be considered as "supernatural," perhaps one reason that Einstein dismissed its validity.
- Another point of view is that Albert Einstein who enjoyed a career of fame and glory, closely working with the government (or shall we say 'Shadow' government) was clearly advised or warned as to not venture in Quantum Theory because it was thought that it would propel the science of physics and mechanics in a direction that unravels the secretes of Universe, ultimately leading to a better understanding of the nature of our organic consciousness, opening doorways into what had been clearly hidden from us, in order for the negative aliens controllers to 'consciously enslave' and prey upon.
- The phenomenon of Quantum Entanglement is conformant with the manifestation of a fundamental Cosmic Principle what the author has introduced and articulated under the auspices of the 'Dualism Principle of Creation' that stipulates everything and every event in the Cosmos is created simultaneously and symbiotically as conjugate pairs with the action or property of one mirroring the other in order to ensure equilibrium, balance, and ORDER within the Cosmos.
- Accordingly, Quantum Entanglement asserts that if a pair of particles, or indeed, the quanta of energy are divided and are observed thereafter, no matter how far they are pulled apart (even galaxies apart, etc.), they inherently 'know' of the presence of one another, and abide by the same pattern of behavior as when they were together before their separations.
- Thus, when two electrons occupying a given orbital with each having a $\frac{1}{2}$ spin opposite to one another are separated from one another, no matter how far that may be, as soon as one electron is allowed to spin, immediately the separated conjugate electron begins to mimic

its action prior to their separation from one another, namely spinning about an axis of identical configuration (orientation) as to the other and in the opposite direction and with the same speed as the other.

- So, it seems that the two electrons know of each other's existence no matter how far of a distance they are apart from one another, repeating the same action as they would if they were still together.
- And, of course, the phenomenon of Quantum Entanglement have been extensively experimentally verified for a host of similar particles and even including those with varied sizes and shapes.
- Thus, not only the Principle of Quantum Entanglement applies to electrons and other subatomic particles but it also pertains to large enough particles as the Buckeye Balls that are a special spherical allotrope of carbon atoms referred to as the Fluorenes.
- It goes to say that no matter how much energy is fragmented as to have myriads of quanta of energies scattered all around, they remain interconnected and 'aware' of the presence of one another, no matter how far they are apart.
- So, Quantum Entanglement is hardly a mystery or "spooky action at a distance."
- It is the key to understanding that we are, indeed, ALL interconnected [122], with an origin that emanates from no less than God ITSELF.
- Accordingly, all sentient beings comprised of quanta of consciousness energies bestowed upon by the God-SOURCE are interconnected.
- This is a concept that is highly difficult for a 3D mind to decipher or absorb as we have all been 'conditioned' to view we are inherently separated from one another, confusing the concept of 'individuality' or 'individuation' (in terms of developing different personalities

based upon the distinct sojourns of life experienced) with utter separation from one another [123].

- And, this is the underlying agenda behind 'Divide and Conquer Strategy' closely and tightly implemented by the negative aliens in favor of being able to easily and readily prey upon us that culminated in parasitizing and harvesting our loosh.

Non-Local and Local (or Physical) Consciousness

- From the multitudes of incidences recorded with respect to the experiences with afterlife (i.e., the question of soul or spirit) as well as numerous reported cases of near-death experiences, without a shadow of a doubt, it is clear that the phenomenon consciousness is not just a theoretical concept but a definite phenomenon that it of crystalline, coherent, intelligible energetic nature that originates from a non-local source that we refer to as the God-SOURCE.
- Furthermore, Non-Local consciousness survives physical death.
- Accordingly, consciousness should be viewed as a coherent wave of energy that is capable of organizing or give rise to intelligence within all things.
- Furthermore, our total perpetual awareness is not observable in 3D reality and stretches beyond the confines of a single space-time dimension such as the 3D physicality [124].
- Consciousness is a phenomenon that is best described as a Non-local concept.
- It is something that is braided in 'non-local' space that may be referred to as the Unified Morphogenetic Field.
- Our consciousness is the end product of the SINGULAR God-SOURCE exploding-imploding upon ITSELF, with the intent to once again experience ITSELF.
- Accordingly, we epitomize a constituent part of the God-SOURCE upon which HE-SHE-IT concentrates HIS-HER-ITS attention, experiencing the sojourns of life.

- And, the mechanism by which such a life experience becomes possible is the advent of time [125], which is associated with the quanta of energy of the God-SOURCE spinning about themselves, spiraling away and towards the bidirectional vector of time [126].
- Creation prompted by an explosion-implosion event gives rise to the dissemination of the quanta of energy all over into what may be described as the myriad of different 'space-time dimensions.'
- In this respect, the vector of time is a directional axis that connects a certain collection of the quanta of energy referred to as an individuated sentient being such as a human being, to its point of origin residing at the center of the Cosmos that is perceived as the incipient SINGULAR point that gives rise to Creation.
- And, this, of course, refers to the God-SOURCE that as an Omnipotent, Omniscient, Omnipresent SINGULAR consciousness being may be regarded as the progenitor of the ALL THERE IS.
- In this respect, consciousness is an energetic waveform that epitomizes a wave of possibilities expressed as a probability density or a wave function that when it collapses upon observation, it gives rise to a manifestation of reality [127].
- When you collapse the waveform of the consciousness energy, you give it the proclivity to anchor itself at a particular location within the Unified Field or the Zero-Point Field, operating as a Non-stationary waveform sequentially torsionally vibrating in time.
- In this respect, prior to its 'observation' process, the quanta of energy of consciousness are in a state of pure energetic free flow forever spiraling back and forth within a transcendental potential.
- However, as soon as you 'observe' a waveform, you collapse its energetic probability density potential, localizing it to anchor itself at given place that describes its particular station of identity.
- From there on, the quanta of energy of consciousness can torsionally vibrate, spiraling back and forth about their axis of time as a transverse wave of consciousness [128-136], with the axis of time

passing through the anchored location that epitomize its point of support or equilibrium and balance.

- The author has referred to such a point as to represent a coordinate on the Neural Network of the God-SOURCE that is formed after the process of Creation and the dissemination of ITS quanta of energy [137] into what is referred to as Cosmos comprised of an ORDERED edifice comprised of space-time dimensions [138-139] that make the process of holographic consciousness reality and life experience [140] possible.
- Therefore, consciousness is a crystal, coherent, intelligible form of energy that emanates non-locally from the God-SOURCE and is then disseminated throughout the Cosmos through a stepping down process, anchoring itself at myriads of cosmological space-time dimensions, communicating with other stations of identity.
- And, the myriad of space-times epitomize contours of energy that are formed in the shape of a series of nested spheres as holograms-within-holograms [141] that form the edifice of Cosmos, otherwise referred to as the Neural Network of God.
- In this respect, the quanta of energy of the God-SOURCE epitomize self-similar fractalized aspects of ITS WHOLE, that together give rise to countless solar organic sentient beings such as humans who represent the 'local' aspect of ITS presence or existence.
- Accordingly, all 'local' solar organic sentient beings receive the consciousness energy of the God-SOURCE from within an open loop of free energy [142], that if untampered with, giving them the propensity for eternal existence and immortality.
- Each sentient being functions as a quantum bio-computer with a CPU that is commonly referred to as its brain and heart complex, with afferent and efferent communication network running respectively to and fro the main organs (e.g., lungs, liver, spleen, stomach, pancreas, spleen, gallbladder kidneys, small and large intestines, etc.), that is referred to as the "vagus nerve."

- With regards to the brain-heart complex and consciousness, our brain-heart system functions as an interface (or receiver) of information originating from the Unified Field to our body, equally transmitting information from our body to the Unified Field.
- Thus, consciousness is not created nor is confined in the domain of 3-dimensional reality.
- Furthermore, the nature of our consciousness is such that as waves of coherent, intelligible energy operates within a spectrum of frequencies.
- This, consciousness is not something that could be precisely measured in the Harmonic Universe in which we operate.
- This suggests that the wave aspect of our eternal consciousness in the unified morphogenetic field that is inherently not measurable by physical means.
- Nonetheless, the physical aspect of consciousness, which seemingly originates from the wave aspect of our consciousness through collapse of the wave function, can be measured by means of neuroimaging techniques like EEG, MRI, and PET scan.
- The unfeasibility to empirically calculatable non-local aspect of consciousness that also has been referred to as 'higher' awareness is something akin to the fields of gravity, of which only the physical effects throughout the universe can be determined.
- Furthermore, one could say that perpetual, non-local awareness, has always existed separately from the physical body, as clearly matter itself originates from the high congealment of energy or consciousness.
- And, certainly there is an organic foundation for our physical waking consciousness with our physical body functioning as an instrument for resonance or a form of interface during our lifetime.
- However, there is no physical, biological foundation of our perpetual consciousness since it originates in non-local space.

- Accordingly, non-local consciousness is not limited to, nor does it exist, within our brain.
- While, our brain has a simplifying function to experience consciousness that excludes the task of producing or generating it.
- Accordingly, non-local consciousness can manifest in physical domains of progressive higher frequential thresholds via the advent of Dark Matter (better referred to as Light or Stealth Matter).
- And, this is how it gives rise to our Lightbody as well morphogenetic field that forms our physical system through our genetics or DNA-RNA system.

Consciousness Communication

- In this respect, communication between the brain and the Unified Field occurs in the form of logic, and that between the heart and the Field of God-SOURCE (Zero-Point Field) by a way of intuitive intelligence [143].
- And, humanity has been traditionally conditioned to think that consciousness is formed by the brain-function.
- This has led to the misconception, as is commonly perceived in mainstream scientific arena, that, therefore, it is erroneously perceived that consciousness ceases to exist at the death of the physical brain, as clearly brain is a physical entity only.
- However, as it has already been recognized by 3D mainstream science (Eccles), there is a distinction between brain and mind.
- Accordingly, the unity of conscious experience is provided by the mind and not by the physical machinery of the brain.
- In fact, brain is a physical entity, while mind plays the important active role in selecting and integrating brain cell activity and molded it into a Unified WHOLE.
- Thus, it proves to say that still contemporary 3D science remains ignorant with respect to functioning of the mind that is intimately

related to the knowledge of the morphogenetic fields and the holographic multidimensional reality structure.

- And, this shortcoming is perhaps the reason mainstream science often misinterprets experimentally gathered data that perhaps the brain causes consciousness.

Pure Consciousness is Hyper Communication

- Consciousness experience can occur instantaneously and simultaneously (non-locality) via a phenomenon that may be referred to as 'hyper communication.'
- Yet, it has always been regarded scientifically challenging to discuss and explain the reported interconnectedness with the consciousness of other persons and even with deceased relatives.
- In particular, the consciousness experiences associated with a 'Self' identity offer memories with cognition, a combination of intellectual understanding involving both logical reasoning as well as intuitive perception enriched with emotion, even from the standpoint of a being, void of, or above, a physical lifeless body.
- And, such a event is akin to having the experience of the consciousness returning into the body.
- Accordingly, the playback of such memories with cognition (logical and intuitive) and emotion offer a chance to preview the past life associated with a Self' identity.
- Thus, 'afterlife review' pertaining to a preview of someone's life in a dimension without the conventional consciousness embodiment and anchorage of consciousness in a space-time deemed as "past, present and future" is quite possible.
- Note that morphogenetic fields are comprised of templates of conscious Light and Sound that serves as 'blueprints' on which experiences in physicality and matter form may be recorded.
- And, consciousness is spiritual energy which is governed by a personal blueprint and energy signature.

- Accordingly, such consciousness records exist, which are available for review with the intent of having them 'cleared' and cleansed of purported negative karma [144-145].
- Accordingly, our eternal consciousness with its own acquired memories finds its origin in a non-local dimension as wave-fields of information, while the brain only serves as a relay station for parts of these wave-fields of consciousness to be received into or as our waking consciousness.
- And, in the case of physicality, these informational fields of our non-local consciousness become available as our 'waking consciousness' (conscious versus subconsciousness or superconsciousness) only through our functioning brain that manifests in the frontal lobe and in the shape of measurable and changing electromagnetic fields.
- Thus, our brain is akin to a TV antenna receiver, as it receives electromagnetic waves and transforms them into images and sounds.
- At the same time, our brain also functions as a TV camera, which transforms these images and sounds into electromagnetic waves?
- These waves hold the essence of all information, but are only perceivable by our senses through suitable instruments like the camera and TV.
- Thus, our brain actually operates as a combination of transmitter-receiver (a transceiver) interface.
- Therefore, the function of brain as well as neuronal networks is that of receiver-conveyor, and not as retainers of consciousness and memories.

Analogy with Modern Day Communications

- One can strive to understand consciousness communication between the nonlocal unified field and our physical 3-dimensional reality by looking at modern day communication.

- All living beings are being continuously exposed to an unceasing electromagnetic information fields, many of which remain undetected by our senses.
- In terms of modern day communication system, a tremendous amount of electromagnetic energetic waves bombard us regularly emanating from Wi-Fi, cell phone towers, millions of mobile calls, satellite TV channels, radio, radars and computers, etc.
- Humans do not realize and are consciously unaware of the massive amounts of electromagnetic information fields and their broadcasted frequencies that permeate the entire planet unless they are engaged in using such devices such as mobile phones, Internet devices such as computers, radio, TV, etc.
- And, such electromagnetic frequencies that are commonly received are not within the mobile phone, laptop, or TV, etc., but rather the receiver of these information fields are our very own human senses, which may result in our consciousness perception.
- A prime example is the Internet, with more than a billion websites, which can be simultaneously received on the planet, but is clearly not located in our laptop.
- The images and sound we experience on TV shows are transmitted to the cable or satellite receiver boxes.
- And, our brain acts as a transceiver and not as a manufacturer of consciousness.
- Thus, the brain's role in the occurrence of consciousness is not its generation or creation, but rather receiving and transmitting its information.
- Note that consciousness does not begin in the 3-dimensional, physical world.
- It already exists non-locally and is disseminated multidimensionally.
- Accessing facets or quality of the Light of consciousness depends on one's own characteristic 'threshold' that may be expressed in terms of propinquity, Light quotient, or natural frequency of vibration.

- And, this is different for some people (is lower or higher) than others.
- This allows people to experience various aspects of heightened conscious awareness, differently.
- Accordingly, the world of our present consciousness according to our level of perception is only one out of many worlds of consciousness that exist, which the author has referred to as different space-time dimensions of consciousness.
