

Building Inspection

TRB + Associates, Inc. offers building safety inspection services for commercial, residential, and industrial facilities. Our inspection staff members are ICC certified and/or licensed engineers experienced in field inspection. Our inspectors are proficient at verifying project conformance to California's model code standards (Building, Electrical, Mechanical, Plumbing, Green Building Standards, and Title 24 Energy & Disabled Access) and locally-adopted ordinances.

TRB+ can provide inspection staff for a single project which may be unique or complex in nature, or can provide long-term inspection support to assist with your agency's daily inspection workload. Our inspections at a minimum include those identified in the California Building Code, and would be amended and/or modified as directed by your agency.

We provide each inspector with all appropriate safety equipment, cell phones, and record documents as necessary to perform his or her duties. Our inspectors are careful to document all inspection activities and adhere to agency-adopted protocols.
