TULSA Procedure

A **MODERN** WAY TO TREAT YOUR
PROSTATE – **WITHOUT SURGERY**

An option for men who
want effective treatment
**without sacrificing sexual
or urinary function.**

NO INCISIONS • NO BLOOD LOSS
NO RADIATION • NO HOSPITAL STAY

WHAT IS THE TULSA PROCEDURE?

The Transurethral Ultrasound Ablation (TULSA) Procedure is an incision-free, robotic treatment for prostate conditions (enlarged prostate or cancer).

It is performed in an MRI suite and uses ultrasound waves to generate gentle heat for ablation (targeted destruction) of unhealthy prostate tissue, while preserving surrounding healthy tissue.

- **FDA-APPROVED**
- **3,000+ PROCEDURES WORLDWIDE**
- **65+ CLINICAL STUDIES**
- **5 YEAR OUTCOMES**

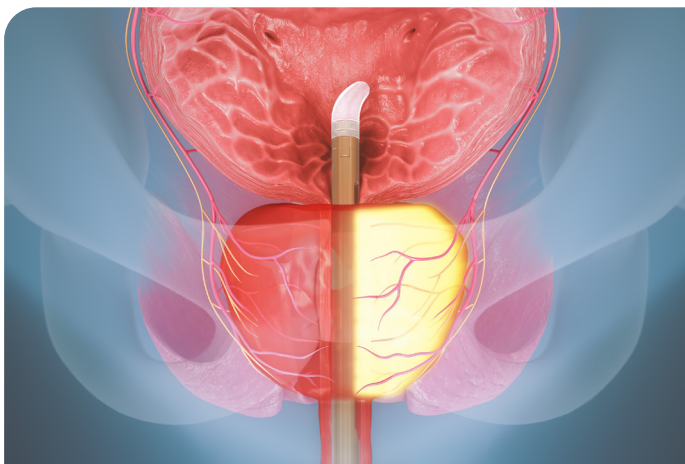

WHY DO PATIENTS CHOOSE THE TULSA PROCEDURE?

- No surgery, no radiation, no incisions, no blood loss
- Custom treatment tailored to each patient's anatomy and needs
- Low risk of side effects like incontinence or erectile dysfunction
- Same-day treatment with no hospital stays and a quick return to daily life
- Solution for enlarged prostate (BPH) and cancer
- Covered by Medicare

HOW DOES THE TULSA PROCEDURE WORK?

1. You'll be asleep under anesthesia
2. Doctor inserts a small device through your urethra
3. MRI imaging shows exactly where to treat
4. Ultrasound waves create heat to ablate (destroy) only the bad tissue
5. You go home the same day

REAL STORIES. REAL PATIENTS.

Meet Bob

“

The TULSA Procedure was the answer to my prostate cancer. It took ~90 minutes and I was home that night having dinner with my family.

”

IS IT RIGHT FOR ME?

If you say YES to any of these,
**the TULSA Procedure may be
right for you!**

- ☐ I have prostate cancer or BPH
- ☐ I want to avoid surgery or radiation
- ☐ I care about preserving bladder control and sexual function
- ☐ I want a fast recovery
