

SEVERE WEATHER AND YOUR BUSINESS PHONES

TLC CAN HELP

We truly understand the hardships that result from weather and storm damage to your business operations. If you have any questions at all on ways to prepare your business phone system for these type of events, TLC Office Systems can help.

WE CAN OFFER

- * Highly reliable VoIP phone plans
- * Automated Distribution and Rerouting of Calls
- * Fail-Over Hosted PBX Backup System
- * Emergency Hosted PBX for Remote Continuity

Our business continuity and disaster recovery services keep you in touch with your customers and partners should the unexpected occur.

FEATURES YOUR PHONE SHOULD HAVE

If your company loses internet, you can forward calls to designated cell phone(s) using the *Transfer to Mobile Phone* feature.

If you have multiple locations, you can **direct calls from a closed location** to one that is unaffected by the storm.

You can **route calls to voicemail and check them via your email** or remotely dial in to check a particular voicemail box.

In some cases, you can **move your phones to a temporary location** with internet service.

Keep business communications alive when the unexpected occurs.

We understand how critical communication is to your business. TLC Office Systems and Pulsar 360, Inc., offer business continuity and disaster recovery (BCDR) services that keep you in touch with your customers and partners should the unexpected occur.

Automated Distribution and Rerouting of Calls

If your location fails to receive calls, we offer automated rerouting of calls between geographically-diverse sites connected to our network, or to a designated off-site number, such as a cell phone or a landline. This allows you to maintain receipt of inbound calls in the event of a power, system, or circuit failure.

Fail-Over Hosted PBX Backup System

Pulsar 360's hosted PBX solution is the perfect back-up for your existing system. If your PBX (either premise-based or hosted) fails, or you lose connectivity to your system, Pulsar 360's hosted PBX will deliver calls via an alternate route, if necessary. The hosted PBX service is also charged on a metered rate to help you save money.

Emergency Hosted PBX for Remote Continuity

This is the best line of defense in the event you lose your ability to work from your existing location due to fire, storm, power outage or other disaster. Simply send your employees to a remote location to work from our hosted PBX with a computer softphone, headset, and internet connectivity. You may be able to resume critical functions in minutes at a temporary location.
