

## Automate Patient Management

Asparia enables you to automatically engage patients at scale while recording all the interactions directly in your EHR so you can see more patients, enhance care, improve quality scores and reduce staff administrative burden.

Our unique approach embeds the solution within the EHR, so the service goes live in days, not months, and without any significant IT work, data duplication, or staff training.

## EHR Embedded Chatbot

Interactive  
Multilingual  
Texting

### Features

Closed Loop Patient Recall

Post Procedure Follow-up

Closed Loop Patient Reminder

Medication Management

No-show Follow-up

Feedback and Reviews

Pre Procedure Prep

Staff-Patient Live Texting

### Benefits

Reduce No-Shows

See More Patients

Increase Revenue

Boost Productivity

Reduce Staff Burden

Improve Quality Score

## Solutions

Asparia solutions are tailored for:

### Health Systems

Asparia is deeply embedded with EHR Systems such as Epic. Health Systems use Asparia to automatically engage patients based on triggers from the EHR. All the activities are recorded in the EHR, thus maintaining the EHR as the single source of truth.

### FQHCs

Federally Qualified Health Centers (FQHCs) today have to cater to a wider range of the population—increased ethnic diversity, all genders and ages and diverse economic groups. Asparia's Conversational Patient Experience Management can deliver chat-based engagement in over 150 languages to the diverse range of patients FQHCs are tasked with managing.

### Clinics

Single and multi-specialty care clinics are under tremendous pressure to reduce overheads even while focusing on delivering the most personalized care customers have come to expect. Asparia's conversational patient experience management helps clinical staff deliver a higher quality of engagement to patients and customers, automate a wider range of tasks, and maintain a more profitable practice.
