

How to Choose A Hearing Professional

Choosing a hearing professional is one of the most important decisions a hearing impaired person can make. Since a hearing aid cannot be prescribed like eye glasses, proper hearing aid recommendation and fitting is highly dependent on the judgment and skill of the professional selecting the instrument. We are concerned about the person and make hearing recommendations to fit your lifestyle and personal needs.

Janeane Murphy, MA, CCC-A Audiologist and Owner

Janeane Murphy is a licensed Audiologist and Owner of Crawfordsville Audiology. She has worked in Crawfordsville for over 20 years and boasts over 25 years experience in the hearing industry. Janeane's career aspirations have always

revolved around providing intimate one-on-one care for all. The diverse nature of the job has provided Janeane the ability to diagnose and successfully fit thousands of patients over the last 20 years, each patient with their own specific needs.

Christine Keen, PCC, H.I.S Patient Care Coordinator

Christine Keen is the Patient Care Coordinator of Crawfordsville Audiology. She is also a Licensed Hearing Instrument Specialist. She has worked in the industry for over 4 years and has used that time to learn as much as she can about the different hearing solutions available. She strives to stay on top of the ever changing technology.

Do You Suffer From Hearing Loss?

Hearing loss is often a gradual process that worsens over time. Numerous factors can affect your hearing, including exposure to noise, sports, music and more. To help determine if you may have a hearing loss, take this simple test:

Yes No

- ☐ ☐ 1. You can hear, but you can't understand. High-pitched sounds, such as women's and children's voices may "disappear," plus confusion among sounds of words such as, "dime," "time," "bake," and "take."
- ☐ ☐ 2. You have difficulty understanding when there is background noise, such as in a restaurant or crowd.
- ☐ ☐ 3. You are continually asking people to repeat words or phrases.
- ☐ ☐ 4. You prefer the TV or radio louder than others do.
- ☐ ☐ 5. You avoid social occasions, family gatherings or group meetings where listening may be difficult.

Hearing Loss Signs

(International Hearing Society)

- Family history of hearing loss.
- Repeated exposure to high noise levels.
- Feeling irritable or tired from the effort to hear.
- Straining to understand conversations and watching people's faces intently while listening.
- Frequently requiring others to repeat what has been said.
- Requiring increased volume for TV and radio while others complain of loudness.
- Ringing in the ears or dizziness.
- Medical history or diabetes, heart, thyroid, or circulation problems.

Custom Fit For Your Comfort

Hearing aids are offered in the following sizes. While some sizes offer better amplification for different types of hearing loss, we can ensure you a comfortable fit with minimal visibility.

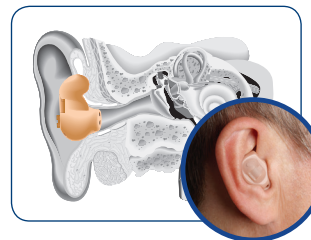

IIC

Invisible-In-The-Canal

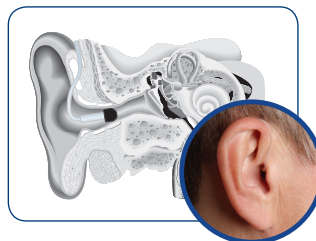

ITE

In-The-Ear
