IKONICS Imaging and GS2 Awards Present:

BLAZERING

Extended Merging Technologies

IKONICS IMAGING
World leader in sandcarving solutions.

SAVE THE DATE | MAY 16-17

This hands-on two-day technical seminar explores the innovative fusion of two distinct but complementary technologies, laser engraving and sandcarving. Seminar participants gain insight on how to upsell to glass customers by transitioning from their laser's shallow etch to the smooth-sanded, deep-carve capabilities of a sandcarver. In addition, participants will work with substrates that were traditionally difficult with lasers, such as polished metals and hard ceramic glazes.

Instructors, Braden Todd of GS2 Awards and Distributor of Trotec Lasers, Darin Jones and Brandon Radovich of IKONICS Imaging, are experts in their respective technologies. While teaching the techniques of merging these technologies, each representative will also give in-depth demonstrations of individual technologies and their uses. Braden, Darin and Brandon will empower students with a working knowledge to combine laser with sandcarving in one process, blazering, to enhance offerings and make dreams a reality.

This seminar will focus on many aspects of both technologies. Here are some of the techniques you will learn from each technology:

Sand carving:

- working with photoresist films
- halftone images
- deep-carve techniques and more...

Laser Engraving:

- using BlazerOrange Masking material
- working with flat and curved substrates
- Stone Lasering Do's and Don'ts and more...
