

Exercise 4: Contemplative Landscape  
LAND 7041 Sustainable Sites I Studio  
Xianglang Li

Experiential Function: When a person is moving from point A to point B along the path, they will experience the site as a journey of working through the disaster. This path is difficult to walk on because of the height of the step (1-2 feet). Metaphorizing the process is not easy, but once you get to the water everything becomes beautiful and we have overcome the suffering.
